

mainStack.cpp

tabs.cpp

```
graph TD; A[mainStack.cpp] --> C[mainStack.h]; B[tabs.cpp] --> C;
```

mainStack.h

The diagram illustrates a dependency structure where two source files, `mainStack.cpp` and `tabs.cpp`, both depend on a common header file, `mainStack.h`. The source files are represented by white boxes with black borders at the top, while the header file is represented by a solid black box at the bottom. Two dark blue arrows point from each source file box down to the header file box, indicating the direction of the dependency.
